SurveilStar Employee Monitoring
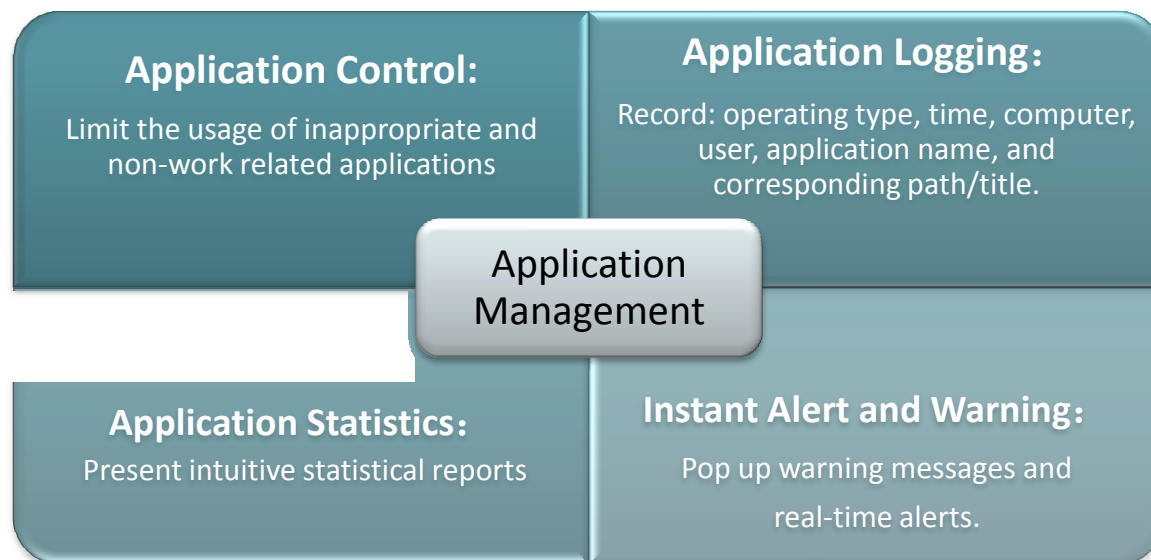

Application Management

[*Control and monitor the usage of application to improve work efficiency.*]

Application Management Module Description

SurveilStar Application Management enables you to control users' application usage.
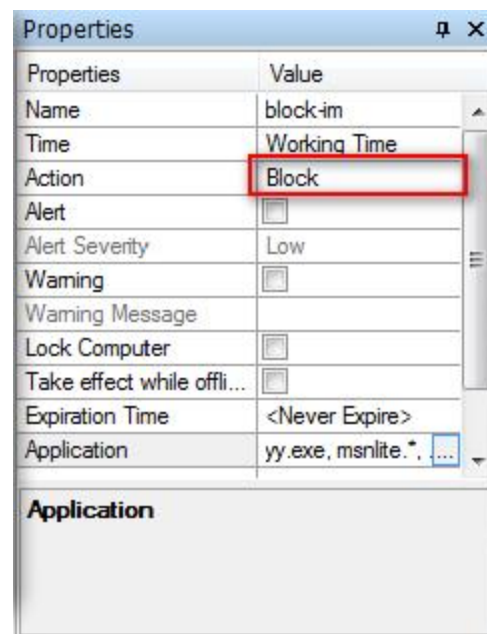

Improper use or management of application may not only affect staff's productivity, the usage of resources, but also involve a violation of company regulation as well as the law. With appropriate policy setting, improper applications can be blocked easily and the detailed application logs help administrators analyze employees' work performance.

Application Control:
Limit the usage of inappropriate and non-work related applications

Application Logging：
Record: operating type, time, computer, user, application name, and corresponding path/title.

Application Management

Application Statistics：
Present intuitive statistical reports

Instant Alert and Warning：
Pop up warning messages and real-time alerts.

Application Control

Many enterprises prohibit their staff from using their own software such as BT, chatting and online gaming software. Application control can help to prohibit or limit the use of unwanted applications.

- Limit the usage of inappropriate and non-work related applications/ application categories (e.g., AIM, MSN Messenger, Yahoo! Messenger, Worldcraft).
- Prohibit users from using specific applications or application categories during a specific time range.
- Send warning messages to users if they are trying to run unpermitted applications.
- Pop up alert messages if unauthorized users access to prohibited applications.

Application Control Policy

Application Logging

The contents of Application Logs include operating type, time, computer, user, application name, and corresponding path/title.

- Record what applications were used.
- Record changes of windows and titles, start time, end time, users, computers and paths.
- Provide powerful searching function for log enquiry.

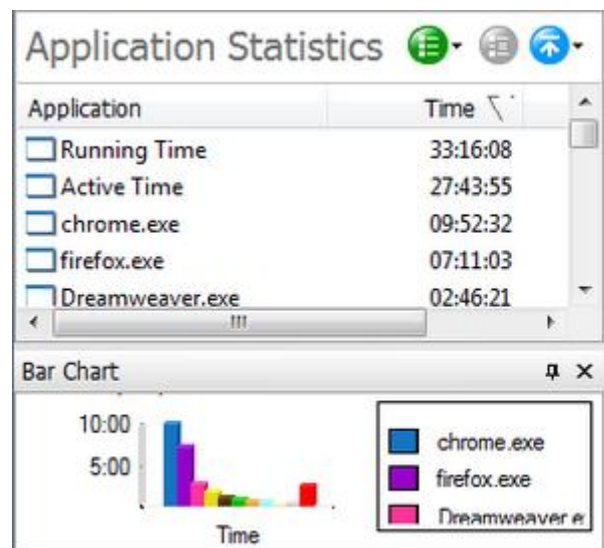

Application Logs

Application Statistics

Application Statistics provides powerful statistical function which focuses on the daily operations of computer and application usage so as to provide detailed records and complete analysis reports for managers to assess employees' work behavior.

- Gather statistics on application usage by exe name, detailed version, custom user group and much more.
- Present intuitive statistical reports in list and chart (pie chart or bar chart).
