

### SurveilStar Employee Monitoring

# IT Asset Management

[Automatically track software and hardware assets enterprise-wide.]

www.surveilstar.com

#### **IT Asset Management Module Description**

**SurveilStar IT Asset Management** module aims to manage hardware and software inventory; Windows patch update and installation; and software deployment. It is an important part to gather detailed hardware and software inventory information which is then used to make decisions about hardware and software purchases and redistribution. It can automatically detect systems vulnerabilities and updated patches, and provides effective solutions.

By using the powerful search engine, administrator can easily query how many computers are installed with specific hardware or software. Then, the patch management function helps to make sure all computers are installed with consistent Windows patches so as to avoid virus and Trojan horse intrusion. Finally, the software deployment function helps system administrator to save much more time especially in mass deployment of software installation or upgrade.

#### **IT Asset Management**

SurveilStar IT Asset Management Module enables you to get a grip on your hardware assets, software assets and detailed log on IT asset changes.

- Automatically gather all hardware and software information
- Provide accurate IT inventory in seconds.
- Record hardware and software changes.
- Manage software licenses.
- Customize asset properties.
- Manually add customized non-IT assets to facilitate asset management.

#### **Automated Patch Management**

- Provide patch scanning report.
- Automatically detect, download and install Microsoft patches.

### **In-depth Vulnerability Detection**

- Automatically detect and analyze system vulnerabilities.
- Provide vulnerability analysis reports.
- Provide effective vulnerability solutions.
